

TPSC Cloud™, Collaborative Governance, Risk & Compliance Software

We believe that we can make an important contribution to the safety & quality in healthcare.

The Patient Safety Company

The Patient Safety Company builds on more than 10 years of experience contributing to safety & quality in healthcare. We do this by making refreshing and innovative technology available to any kind of healthcare organization.

Healthcare processes are complex and full of risk. The need to comply with a number of laws, regulation, and accreditation standards is growing. In addition, patients, their relatives, employees, insurance organizations, and regulators hold high expectations and demands of healthcare organizations. Image damage, claims, penalties, increased supervision and premiums are the result if the organization is not able to comply.

To prevent these risks, process optimization requires constant attention. The central recording of information, the securing of secondary processes, the measurement of process deviations and communication are essential if you want to succeed and continuously improve.

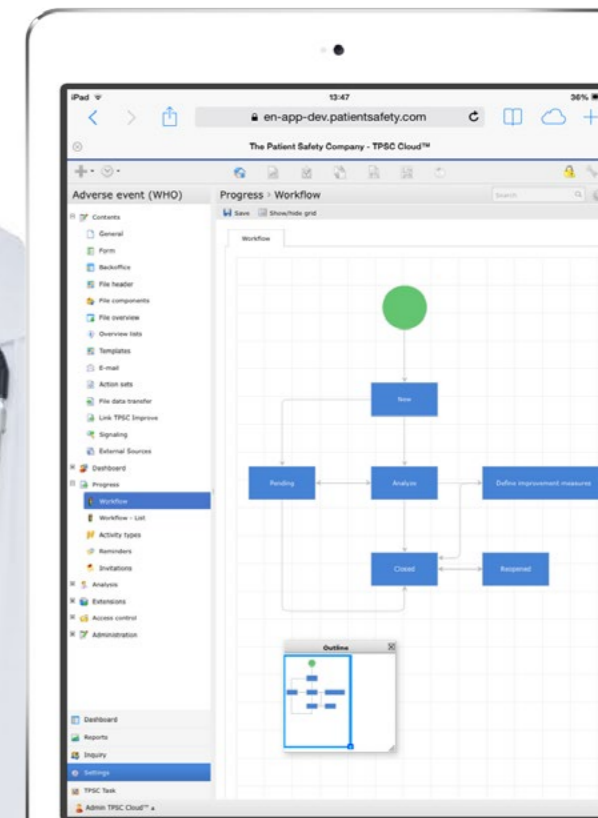

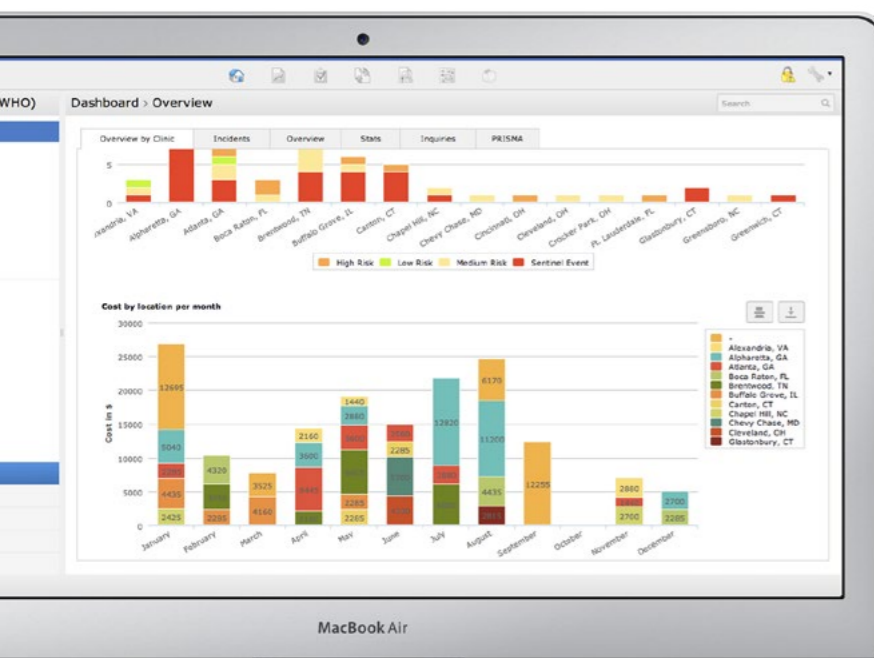

TPSC Cloud™ enables you to manage risks and relevant data in one repository. Information about processes is collected, analyzed and improvement actions are initiated. Examples are information about adverse events, complaints, audits and other kinds of health registrations.

These registrations are collected by online forms, which are available via desktop and mobile devices. A file is automatically generated based on the online form submitted. Information within the file is supplemented, analyzed, monitored and made available to the people involved.

Health registrations result in valuable improvement actions. These Improvements actions are centrally recorded and executed via a specified procedure, in order to systematically improve the quality and safety of healthcare.

This all comes together within TPSC Cloud™ and its Collaborative Governance, Risk & Compliance software.

The software is available in a secure healthcare cloud, with solutions easily integrated with your current software applications. The flexibility of the software enables the healthcare organizations to respond quickly to changes. They are able to create new applications, or adjust current applications, within the TPSC Cloud™ platform by themselves, which can serve their changing needs for information over time.

Collaborative Governance, Risk & Compliance software

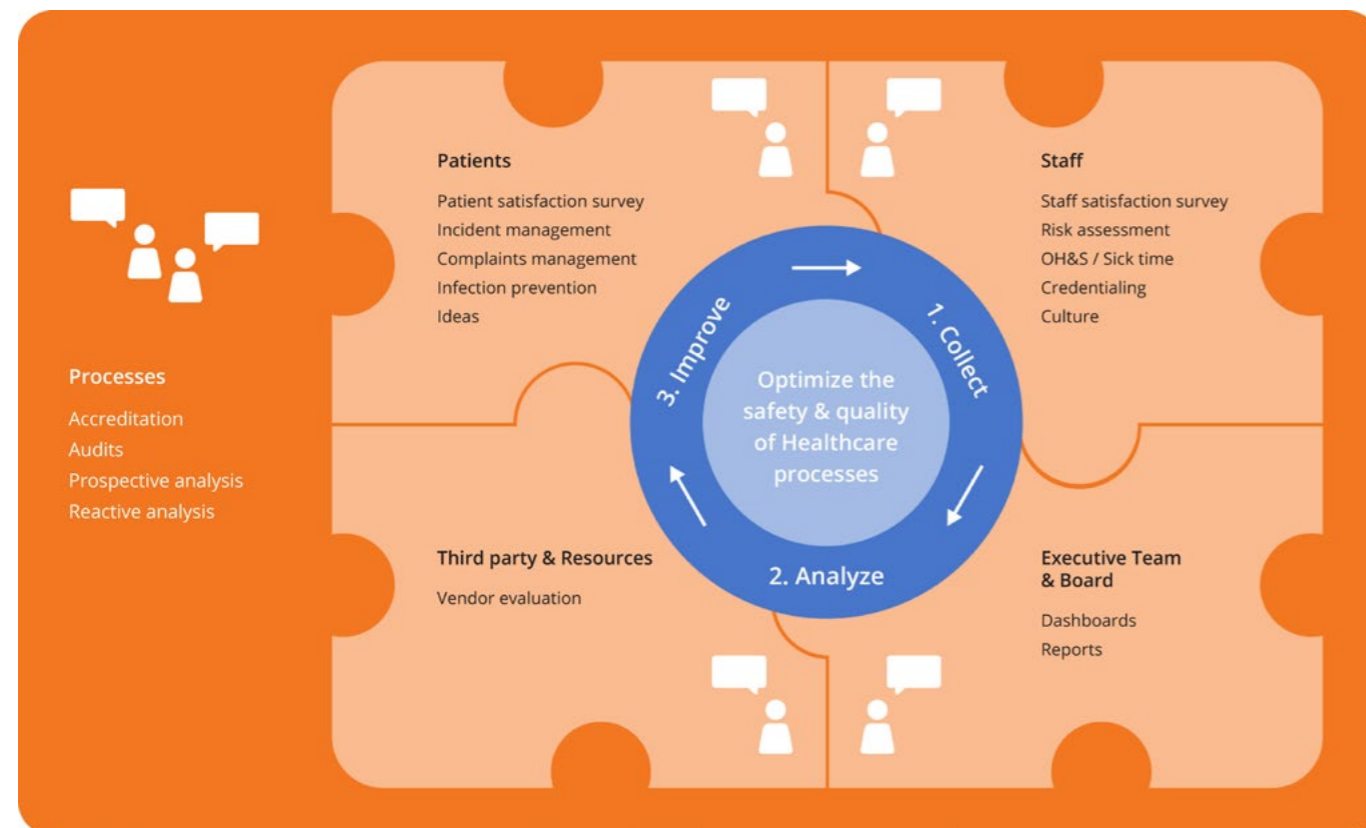

Collect, Analyze & Improve!

TTPSC Cloud™ platform is Collaborative Governance, Risk & Compliance software that includes a wide range of solutions. Each solution aims to optimize one or more existing processes to improve the overall quality and safety of the healthcare organization.

Healthcare organizations have to deal with various stakeholders. The Collaborative Governance, Risk & Compliance software helps

to optimize and measure results for each stakeholder; from patients and staff to the management and even third parties.

Each and every software solution within the Collaborative Governance, Risk & Compliance framework is based on the same principles (1) collecting data, (2) analyzing data, (3) and assuring improvement actions.

TPSC Cloud™ delivers unique benefits

Modular system

Each application functions as a stand-alone solution, which can also be fully integrated with other applications. Together they form a total solution tailored to your specific needs.

Executive Dashboards

The real time & personal dashboards provide you valuable insights into current reports, analysis results and recommendations for improvement.

Secure

Only employees who are involved in the specific process have access to the relevant file. Within this file, only they are authorized to make changes to the parts that are relevant to them.

Compliance

Comply with every statutory requirements relating to quality and safety assurance.

Flexibility

The software is very flexible. Each component of the software can be configured to your specific needs. This means that our software can be easily configured to follow any process and build unique workflows.

Integration

Standard interfaces with your EMR, HIS, HR system or Active Directory will result in a reduction of data entry errors and administrative tasks.

Process supporting

Files include automatic status transitions based on the information present in the file. Emails and alerts inform the people involved about status transitions and actions to take and important information.

TPSC's Expertise

Consulting services

The implementation of our software solutions involves a close cooperation between you and TPSC. During the implementation and while using the software solutions, you can always depend upon the knowledge and skills of our consultants. Our consultants have a deep knowledge of the software and can advise you about complex and strategic issues and train your staff in using the software. Our consultants can take care of your entire application management as well as your implementation.

Training

The Patient Safety Company offers various training programs to advance your knowledge of the TPSC Cloud™ software platform. Our consultants provide the courses you need. Their advanced knowledge of the software will answer all your questions. The courses are given in groups of 4 to 8 participants. Participants can come from different healthcare organizations and share insights.

Support

Our business philosophy is based on building and maintaining long-term relationships with our clients. We therefore deliver excellent support services. Our Collaborative Governance, Risk & Compliance software comes along with comprehensive support services and a 24/7 service desk. In this way we ensure you can optimize the use of the software at all times.

Partners

We believe that strong partnerships make businesses grow. Our Value Added Agents, referral partners and professional experts make an important and valuable contribution to our network by providing expert, local support to our customers, including implementation of the platform, expert training and local system support. Many of our Value Added Agents are involved in the development of custom applications.

We believe that we can make an important contribution to the safety & quality in healthcare.
