

# Custom Solutions

*Easily & quickly develop your own solutions!*

Healthcare organizations use an enormous amount of data collection tools. Unfortunately, many of them are still paper based. However, it would be much more efficient and effective to automate these processes. Our development platform TPSC Cloud™, contains the unique opportunity to develop your own applications. By using a flexible point-and-click method, the need for programming disappears. This allows you to quickly and easily develop applications which fully support the wishes and needs of your organization. You can configure exactly those data sets, organizational rules and workflows, which your organization aims for.

## Basis components of Custom Solutions

Any solution on the TPSC Cloud™ development platform consists of several basic components. With these components, you can configure applications that fully meet your information needs. Of course our expert consultants can also configure customized applications for you.

### Online forms

Gather any information you need by building easy-to-fill-in online forms and files. You have more than 25 types of questions available to capture the information you need. Online forms are 24/7 accessible by using desktop and mobile devices.

### Files

A file is automatically created for each online form submitted. Create a clear file overview using custom fields and tabs. The 'drag & drop' feature will get you a customized view.

### Workflow

A file can follow a workflow that automates your business process and reduces workload. A workflow is easy to configure by using the graphical interface.

### Notifications & email alerts

The workflow is supported by automatic (email) notifications and alerts. In this way, responsible persons are informed about what actions they have to take. Specific actions are automatically assigned to these persons.

### Real-time reports & dashboards

Create insight and overview for your management. Display and share your business critical information real-time using a wide variety of graphical representations.

# Discover the benefits

## Create every overview you wish

Group, filter and search your real-time data to get even more insight. Create all the grids you need to filter, select and sort data.

## User management

Establish, grant and control proper rights to all users of specific applications. TPSC has designed intelligent multilevel user management.

## Classifying risks

Classify your events and files by determining the impact and probability. The risk level is automatically scored and shown in the file.

## Management dashboards & reports

Real-time management dashboards and reports give you a clear overview of the current situation. Create templates in the style you wish and generate quickly and easily your reports.

## Create relations between files

Stop time-consuming exercises. Define relations and discover trends based on parameters you define. Additionally, you can manually link files together.

## Graphical workflow manager

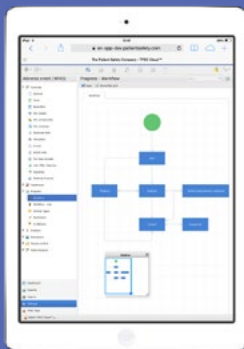

Reduce your workload. Automate your business processes by using the graphical interface.

## Audit trail

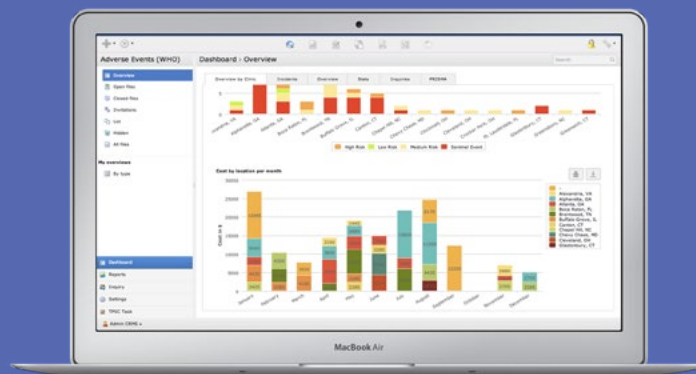

All changes within a file or within the settings are logged. You can always see what changes have been made, by whom and when.

## TPSC Training

Learn how to use the basic components of the TPSC Cloud™ development platform, so you can develop you own healthcare applications. TPSC provides (online) training courses at any level.
